

Jeff Keith

Senior Full Stack Engineer / Engineering Manager

North Port, FL • me@jeffkeith.me • 585 738 8598 • [LinkedIn](#) • [GitHub](#) • [Portfolio](#)

Summary

Senior Full Stack Engineer and Engineering Manager with 20+ years of experience designing, building, and scaling production web applications while leading high-performing teams. Strong background in TypeScript/JavaScript stacks, system architecture, cloud platforms, and end-to-end feature ownership. Builder-minded technical leader who combines hands-on engineering with people leadership, architectural direction, mentoring, and cross-functional collaboration. Experienced owning complex systems from design through production while also supporting team growth and delivery excellence. Recently completed a focused professional development period deepening expertise in AI-enabled systems, modern application architecture, and production-grade integrations. Passionate about building reliable, elegant software, raising engineering standards, and leveraging AI to accelerate product development and team effectiveness.

Professional Development – AI & Full Stack Technical Leadership

Independent Study / Hands-On Projects

May 2025 – Present

Intentional professional development period focused on strengthening principal-level engineering skills across full-stack architecture, AI integration, and production system design. Built two prototype applications: **sloot.ai**, an agentic automation platform with connectivity to 2,500+ services and custom MCP servers; and **genny.bot**, a generative AI application for creating and manipulating images and video using modern multimodal models. GitHub repositories, architectural deep-dives, and live application walkthroughs are available upon request.

- Built and deployed **MCP (Model Context Protocol) servers**, enabling structured, secure interaction between applications and AI models.
- Designed and implemented **web-based applications integrated with AI/ML models**, including OpenAI, Claude, Gemini, Grok, and DeepSeek.
- Gained hands-on experience orchestrating multi-model workflows, prompt design, tool calling, and system boundaries.
- Explored best practices for AI integration in production systems, including reliability, observability, and responsible usage.
- Applied learnings to accelerate feature development, improve developer workflows, and prototype complex systems quickly.

- Used this period to sharpen architectural judgment and return to the workforce as a **hands-on technical leader capable of owning complex systems while guiding teams through modern AI-driven development.**
-

Professional Experience

Engineering Manager

ButcherBox – Boston, MA

July 2021 – May 1, 2025

- Led and supported a cross-functional engineering team through all Scrum ceremonies, fostering accountability, engagement, and continuous improvement.
- Conducted weekly 1:1s focused on career growth, performance feedback, and team health.
- Reviewed code regularly to ensure quality, knowledge sharing, and removal of technical blockers.
- Interviewed, hired, and onboarded engineers, contributing to team growth and culture.
- Partnered closely with Product Management and Scrum leadership to align delivery with OKRs and business goals.
- Implemented an improved release flow that reduced production defects and improved overall customer experience.
- Notable features released include a new member recipe experience, an AI-enhanced cancellation flow leveraging Palantir Foundry, and a trial box membership offering.

Lead Developer

Records One – Rochester, NY

March 2019 – July 2021

- Managed a fully remote development team in a Scrum environment.
 - Led sprint ceremonies including daily standups, refinement, retrospectives, and reviews.
 - Reviewed, approved, and merged pull requests while mentoring engineers on best practices.
 - Coordinated JavaScript releases and deployments with server and data teams.
 - Designed and developed Node.js APIs and integrated them into front-end applications.
 - Built CI pipelines and integration tests using Jenkins.
 - Improved build and deployment workflows through custom Grunt tasks.
-

Web Application Developer

FabSuite / Trimble – Kennesaw, GA

January 2016 – April 2019

- Primary developer for FabSuite Go, an API-driven platform for steel fabrication project management.
- Designed and implemented features for inventory, shipping, inspections, and 3D model integration.
- Developed custom routing frameworks and implemented Google Material Design standards.
- Worked remotely in a Scrum-based environment using Jira and Google Workspace.

Web Application Developer(freelance)

Gigaweb / SavingLots.com / AsSeenOnTv.com – Rochester, NY
1997 – 2016

- Designed, built, and maintained custom web applications and e-commerce platforms across freelance, startup, and owner-operator roles.
- Delivered custom websites and marketing solutions for small businesses, improving visibility, conversions, and operational efficiency.
- Founded and operated an e-commerce platform, implementing payment processing, real-time inventory, shipping integrations, and administrative tooling.
- Developed full e-commerce systems using PHP and MySQL, contributing to early growth and long-term scalability.

Education

Computer Science (No Degree)

Rochester Institute of Technology – Rochester, NY
1996 – 1998

Associate's Degree – Business Management

Finger Lakes Community College
1990 – 1994

Technical Skills

Core Languages: JavaScript (ES6+), TypeScript, SQL, HTML, CSS

Modern Frameworks: React, Remix, Node.js

AI / LLM Integration: OpenAI, Claude, Gemini, Grok, DeepSeek, MCP Servers, Prompt Engineering, Tool Calling

Platforms & Cloud: AWS, Docker, Linux/Ubuntu

Datastores: PostgreSQL, MySQL, MongoDB

DevOps & Delivery: Git, CI/CD, Jenkins

Product & Commerce: Shopify, WordPress

Ways of Working: Agile, Scrum, System Design, Engineering Management
